*** Note:**

All Navy ships have been fitted into the Royal Navy rating system, used during the Napoleonic Wars, for historical accuracy.

They have, therefore, been split into the new groups shown above. Despite the lowest 2 groups technically being 'unrated', I have kept them as class 7 and 8 ships.

**** Note:**

There seems to be some confusion in the files in Ships_init.c in relation to which ship and which stats the Black Pearl should have, both in cursed and un-cursed state, with multiple examples in the code that might lead to errors?//BB

(+) Note:

All ships with the (+) sign in front of their name were not previously included in the system, but have now been added. Among these are the 'unique' ships, which are purchasable via Vanderdecken's shipyard.

(p) Note:

Also now included are some of pgargon's highly detailed ships, originally designed for AoP2: CoAS.
